respectively. METH1 and METH2 have been found to be potent inhibitors of
anglogenesis both in vitro and in vivo. They can be used for treating
cancer and other disorders related to anglogenesis including abnormal
wound healing, inflammation, rheumatoid arthritis, psoriasis,
cancer and other disorders, related to anglogenesis including abnormal
wound healing, inflammation, rheumatoid arthritis, psoriasis,
cancer and other disorders, and arterial-venous maiformations.
They may be useful in treating deficiencies or disorders of the immune
system, by activating or inhibiting the proliferation, differentiation,
or mobilisation (chemotaxis) of immune cells. The etalogy of these
cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or
toxins), or infectious. They can also be used to treat infiammatory
conditions, both chronic and acute conditions. The products can also
used for detection and disagnosis. AAZ32002 to AAZ32080, and AAY49503 to
AAY49511 represent sequences given in the exemplification of the present

                                                  The invention relates to the novel human ADAM (A Disintegrin And Metalloproteases MDTS4 (AAB73549) and MDTS5 (AAB73550). The metalloproteases can be used for the treatment of cancers and arthritis. The invention also relates to the genes encoding MDTS4 and MDTS5, vectors and host cells containing the MDTS4 or MDTS5 specific for MDTS4, and methods of screening for compounds which modulate the activity of MDTS4 and/or MDTS5. The present

                           The present sequence is human METH1 (ME for metalloprotease and TH for thrombospondin). METH1 can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumnurs, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunlon fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, coronary collaterals, crebral collaterals, arteriovens malformations, ischaemic limb angiogenesis, osler-Webber syndrome, plaque neovascularisation, telangiectasia, haemophilac joints, angiofibroma, fibromuscular dysplasia, wound granulation, Crohn's disease or atherosclerosis. METH1 can also be used in birth control. METH1 can also be used in diagnostic methods for the prognosis of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        683

ITGL-TSP polypeptides can be used in the treatment of angiogenic diseases such as cancer, cancer metastasis, chronic inflammatory disorders, rheumatoid arthitis, atherosclerosis, macular degeneration or diabetic retinopathy, restenosis, Alzheimer's disease and tissue remodeling. They can be used to treat a subject in need of enhanced activity or expression of the ITGL-TSP polypeptide.
                                                                                                                                                                                                                                                                                                                                                                        ITGL-TSP; integrin ligand; anglogenic disease; cancer; atherosclerosis; chronic inflammatory disorder; rheumatoid arthritis; tissue remodeling; macular degeneration; diabetic retinopathy; Alzheimer's disease; human;

The present invention relates to human METH1 and METH2 (ME for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003.

METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonution fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, cleroderma, trachoma, vascular adhesions, myocardial angiogenesis, cononary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, osler webber syndrome, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, fibromuscular dysplasia, wound granulation, Crohn's disease or therosclerosis. METH can also be used in birth control. METH can also be used in diagnostic methods for the prognosis of cancer. The present sequence is a protein isolated in the present invention.
                                                                            Human; METH1; metalloprotease; thrombospondin; angiogenesis inhibition; cancer therapy; benign tumour; ocular angiogenic disease; rheumatoid arthritis; psoriasis; wound healing; endometriosis; vasculogenesis; granulation; hypertrophic scar; nonunion fracture; scleroderma, trachoma; vascular adhesion; myocardial angiogenesis; coronary collateral; cerebral collateral; arteriovenous malformation; ischemnic limb angiogenesis; Osler Webber syndrome; plaque neovascularisation; telangiectasia; haemophiliac joint; angiofibroma; fibromuscular dysplasia; wound granulation; Crohn's disease; atherosclerosis; birth control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ţ

The present sequence represents human Tango-71. Tango polypeptides are useful for identifying compounds which bind the polypeptide via direct binding, competition binding assays or Tango-71, -73, -74, 76 or -83-mediated signal transduction. Tango polypeptides are also useful for identifying modulating compounds by determining effect on Tango activity. Tango polypeptides and nucleic acids are useful for diagnosing diseases related to aberrant expression of Tango, and Tango polypeptides are useful for raising antibodies which can be used in diagnostic assays for detection of Tango, and also for generating antibodies so prevention and protection.

This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 86 movel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAX04311-X04410; amino acid sequences AAX04311-X04410; amino acid sequences AAX06155, which are useful for preventing, treating or ameliorating medical conditions can be diagnosed by determining the amount of the new polypucleotides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lafleur DW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a murine ADAMTS-1 protein. ADAMTS-1 is a metalloproteinase. The specification describes another related domain and possesses a c. elegans GON-1 protein, that lacks a transmembrane domain and possesses a predicted metalloprotease domain between residues 269-456. In C. elegans hermaphrodites, GON-1 is required for migration of two distal tip cells to produce elongated tubes, whereas in males, GON-1 is required for migration of a single linker cell to produce a single elongated tube. The protein of a single linker cell to produce a single elongated tube. The protein is used in the method of the invention. The specification describes a method for identifying a modulator of a protein that contains a metalloproteinase domain and a thrombospondin
                                                                                                                                                                                                                                                             GON-1; metalloproteinase; cell migration; modulator; ADAMTS-1; metalloproteinase domain; thrombospondin domain; abnormal cell migration; organ shaping; sterility; cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          domain. The method comprises treating a target organism, having a developing gonadal cell that is responsive to the protein, with a test compound, and determining any change in migration or shape of the cell attributable to the test compound. The compounds identified are potential therapeutic modulators of abnormal cell migration and organ shaping, e.g. for rendering animals (specifically nematodes) sterile and for inhibiting cancer metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TARQEDEYLHLIPDAQFLAPARSTEHLGVPLQGLTGGS-----SDLRRCFYSGDVNA 109

The present sequence is mouse metalloproteinase ADAMTS-1. The ADAMTS family of proteins is closely related to the ADAM (A Disintegrin and Metalloproteinase Domain) family. Members of the ADAMTS family contain a thrombospondin domain in addition to the disintegrin and metalloproteinase domains found in the ADAMS. ADAMTS polypeptides are useful for the manufacture of medicaments for treating conditions associated with neuroinflammation and/or neurodegeneration, such as Alzheimer's disease, Parkinson's disease and stroke. They are also useful for treating conditions associated with cell proliferation, cell migration, inflammation and/or anglogenesis, such as cancer, arthritis and autoimmune diseases. They can be used to treat patients afflicted with an invasive tumour, a brain tumour or brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polynucleotide encoding novel members of a disintegrin, metalloproteinase and thrombospondin domain protein family used to prevent and treat Alzheimer's disease, cancer and autoimmune diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              624
                                     This sequence represents a novel human metalloproteinase-disintegrin protein with a thrombospondin domain (ADAMTS-1). The protein may be in drug compositions and foodstuffs, as an agent for decreasing the leukocyte and thrombosyte blood count and increasing the erythrocyte blood count, e.g. for treatment of inflammatory diseases such as rheumatoid arthritis, hepatitis, nephritis, crohn's disease, asthma
                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            129 TLGMADVGTVCDPSRSCSVIEDDGLQAAFTTAHELGHVFNMPHDDAKQCASLNGVNQDSH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A: Description: catalyzes cleavage of the propeptides of type I and II collagens prior C; Keywords: hydrolase; metalloproteinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      procolingen N-endopeptidase (EC 3.4.24.14) I - bovine
NiAlternate names: procollagen N-proteinase
C; Species: Bos primigenius taurus (cattle)
C; Accession: T18517
R; Colige, A.; Nusgens, B.V.; Lapiere, C.M.
submitted to the EMBL Data Library, February 1996
A; Description: Cloning of the cDNA of the bovine procollagen I N-proteinase.
A; Reference number: 218941
A; Status: preliminary; translated from GB/EMBL/DDBJ

DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.

PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPERTIDASE.

SIMILARITY: BELONGS TO PERTIDASE FAMILY M12B.

SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.

SIMILARITY: CONTAINS 3 TSP TYPE-1 DOMAINS.

CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Molecular cloning of a gene encoding a new type of metalloproteinase-disintegrin family protein with thrombospondin motifs as an inflammation associated gene.";

"The thrombospondin motif of aggrecanase-I (ADAMTS-4) is critical for aggrecan substrate recognition and cleavage.";

J. Biol. Chem. 275:25791-25797(2000).

-I. FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTEOGLYCAN, AND MAY BE INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE DESTRUCTION OF AGGRECAN IN ARTHRITIC DISEASES. COULD ALSO BE A ONE CRITICAL FACTOR IN THE EXACERBATION OF NEURODEGENERATION IN ALZHEIMER'S DISEASE.

-I. CAMPALYTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-1-Ala-393
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATS4_HUMAN STANDARD; PRT; 837 AA.

*ADAM-TS5, ADAM-TS6, and ADAM-TS7, novel members of a new family of zinc metalloproteases.";

J. Biol., Chem. 274:2555-2563(1999).

-I. FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTEOCLYCAN, AND MAY BE INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE DESTRUCTION OF AGGRECAN IN ARTHRITIC DISEASES. MAY PLAY A ROLE IN PROTEOLYTIC PROCESSING MOSTLY DURING THE PERI-IMPLANTATION PERIOD.

-I. CALLALYTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-|-Ala-393
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ARTHRITIC PATIENT.

DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELULAR MATRIX.

"ADAM-TS5, ADAM-TS6, and ADAM-TS7, novel members of a new family of
zinc metalloproteasess.";
1. Biol. Chem. 274.2555-2553(1999)
-!- FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTEOGLYCAN, AND MAY BE
INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE
DESTRUCTION OF AGGRECAN IN ARTHRITIC DISEASES. MAY PLAY A ROLE IN
PROTEOLYTIC PROCESSING MOSTLY DURING THE PERI IMPLANTATION PERIOD.
-!- CATALYTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-|-lala-393
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16-OCT-2001 (Rel. 40, Created)

Associated with the extracellular matrix (By similarity).

-:- TISSUE SPECIFICITY: ENZYMATIC ACTIVITY IS DETECTED AT HIGH LEVEL.

-:- TISSUE SPECIFICITY: ENZYMATIC ACTIVITY IS DETECTED AT HIGH LEVELS IN ALL TYPE I COLLAGEN-RICH TISSUES SUCH AS SKIN, BONES, TENDONS AND AORTA AND AT LOW BEYEL. IN BRAIN AND THYMUS. THE MRNA LEVELS WERE DISPROPORTIONATELY HIGH IN HEART, LIVER, RETINA AND MUSCLE.

-:- DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.

-:- PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY).

- IDISEASE: DEFECTS IN ADAMTS2 ARE THE CAUSE OF DERNATOSPARAXIS, A RECESSIVELY INHERITED DISCARDER CHARACTERIZED BY SEVERE SKIN RECESSIVELY INHERITED DISCARDER CHARACTERIZED BY SEVERE SKIN FRAGILITY AND BIOCHEMICALLY BY THE AMINO TERMINUS.

- INCOMPLETELY PROCESSED AT THE AMINO TERMINUS.

- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12B.

- SIMILARITY: CONTAINS 1 DISINTEGRIN LIKE DOMAIN.

- SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS.

- CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
-1- SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO COLLAGEN TYPE XIV.
Nusgens B.V., Laplere C.M.;
"Characterization and partial amino acid sequencing of a 107-kDa procollagen IN Proteinase purified by affinity chromatography on immobilized type XIV collagen.";
J. Biol. Chem. 270:16724-16730(1995).
- FUNCTION: CLEAVES THE PROPEPTIDES OF TYPE I AND II COLLAGEN PRIOR TO FIBRIL ASSEMBLY. DOES NOT ACT ON TYPE III COLLAGEN. MAY ALSO PLAY A ROLE IN DEVELOPMENT THAT IS INDEPENDANT OF ITS ROLE IN COLLAGEN BIOSYNTHESIS.
- COLLAGEN BIOSYNTHESIS.
- CATALYTIC ACTIVITY: Cleaves the N-propeptide of collagen chain alpha-1(I) at Pro-|-Gln and of alpha-1(II) and alpha-2(I) chains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ZINC (CATALYTIC) (POTENTIAL). ARE PRODUCED BY ALTERNATIVE SPLICING. SPNPI HAS NO SIGNIFICANT N-PROCOLLAGEN PEPTIDASE ACTIVITY.

TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVEL IN SKIN, BONE, TENDON AND ACRTA AND AT LOW LEVELS IN THYMUS AND BRAIN.
DOWAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACLLULAR MATRIX.
PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPERTIDASE (BY
                                                                                                                                                                                                                                                                                                                                          COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO COLLAGEN IYPE XIV (BY SIMILARITY).
SUBGELLULAR LOCATION: Secreted. Associated with the extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -i. DISEASE: Defects in ADAWTS2 are the cause of Ehlers-Danlos syndrome type VIIC (EDS-VIIC), a recessively inherited connective-tissue disorder characterized clinically by severe skin fragility and joint hypermobility and biochemically by the presence in skin of procollagen incompletely processed at the N-terminus.
-i. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12B.
-i. SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.
-i. SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS.
-i. CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
